

General Exam Writing Tips

1. Read the question carefully.

- Underline key words (like “Explain,” “Differentiate,” “Draw diagram,” “List,” “Write program”).
- This tells you *what kind of answer* the examiner expects.

2. Write in clean, neat handwriting.

- Leave one line space between points.
- Use underlining or bullet points for important terms.
- Draw diagrams using pencil and ruler.

3. Stick to what’s asked.

- Don’t overwrite or go off-topic.
 - Examiners prefer short, correct, and well-structured answers.
-

How to Write 2-Mark Answers (Short / Objective Type)

Goal: **Be precise, factual, and quick.**

Each answer should take **3–4 lines** only.

Format:

1. **Definition / Direct Answer** — 1 line
2. **Example / Key point** — 1 line
3. (If applicable) — small formula or diagram

Example:

Q: Define Compiler.

A: A compiler is a language translator that converts an entire high-level program into machine code at once.

Example: C++ uses a compiler to generate executable code.

Tip: For 2-mark answers —

- Use keywords like “It is,” “They are,” “Used to,” “Example:”
- Avoid long explanations — short and straight to the point.
- If the question is numerical, show formula + one-line working.

How to Write 10-Mark Answers (Descriptive Type)

Goal: **Show knowledge, structure, and clarity.**

Spend 10–12 minutes per 10-mark question.

Ideal Format (Follow this for every long answer)

1. Introduction (2 marks)

- Define the main term or concept.
- Give short background if needed.

2. Explanation / Body (5–6 marks)

- Write **important points in order** using headings or bullet points.
- Underline key terms.
- Use **diagrams / tables / flowcharts** wherever possible — this makes a big impression!
- Give **examples or small code snippets** if it's programming.

3. Conclusion (1–2 marks)

- Summarize or mention importance/application.
